

Produtividade, Serviços e Desenvolvimento Territorial

**Webinar CCP «Os serviços e a competitividade urbana »
9 Março 2021**

Joaquim Oliveira Martins
(CEPII and University Paris-Dauphine)

Plano da apresentação

- 1) Qual é a contribuição dos diferentes territórios à produtividade nacional?
- 2) Quais são os diferentes modelos e principais determinantes da produtividade urbana/regional? O papel dos bens & serviços transacionáveis e dos sistemas urbanos
- 3) Como desenhar uma estratégia nacional de produtividade baseada numa abordagem territorial? O papel da economia urbana é fundamental, sobretudo numa economia de serviços.
- 4) A implementação de uma abordagem territorial requiere um investimento importante em governança e descentralização.
- 5) Cenários a longo-prazo para regiões e cidades

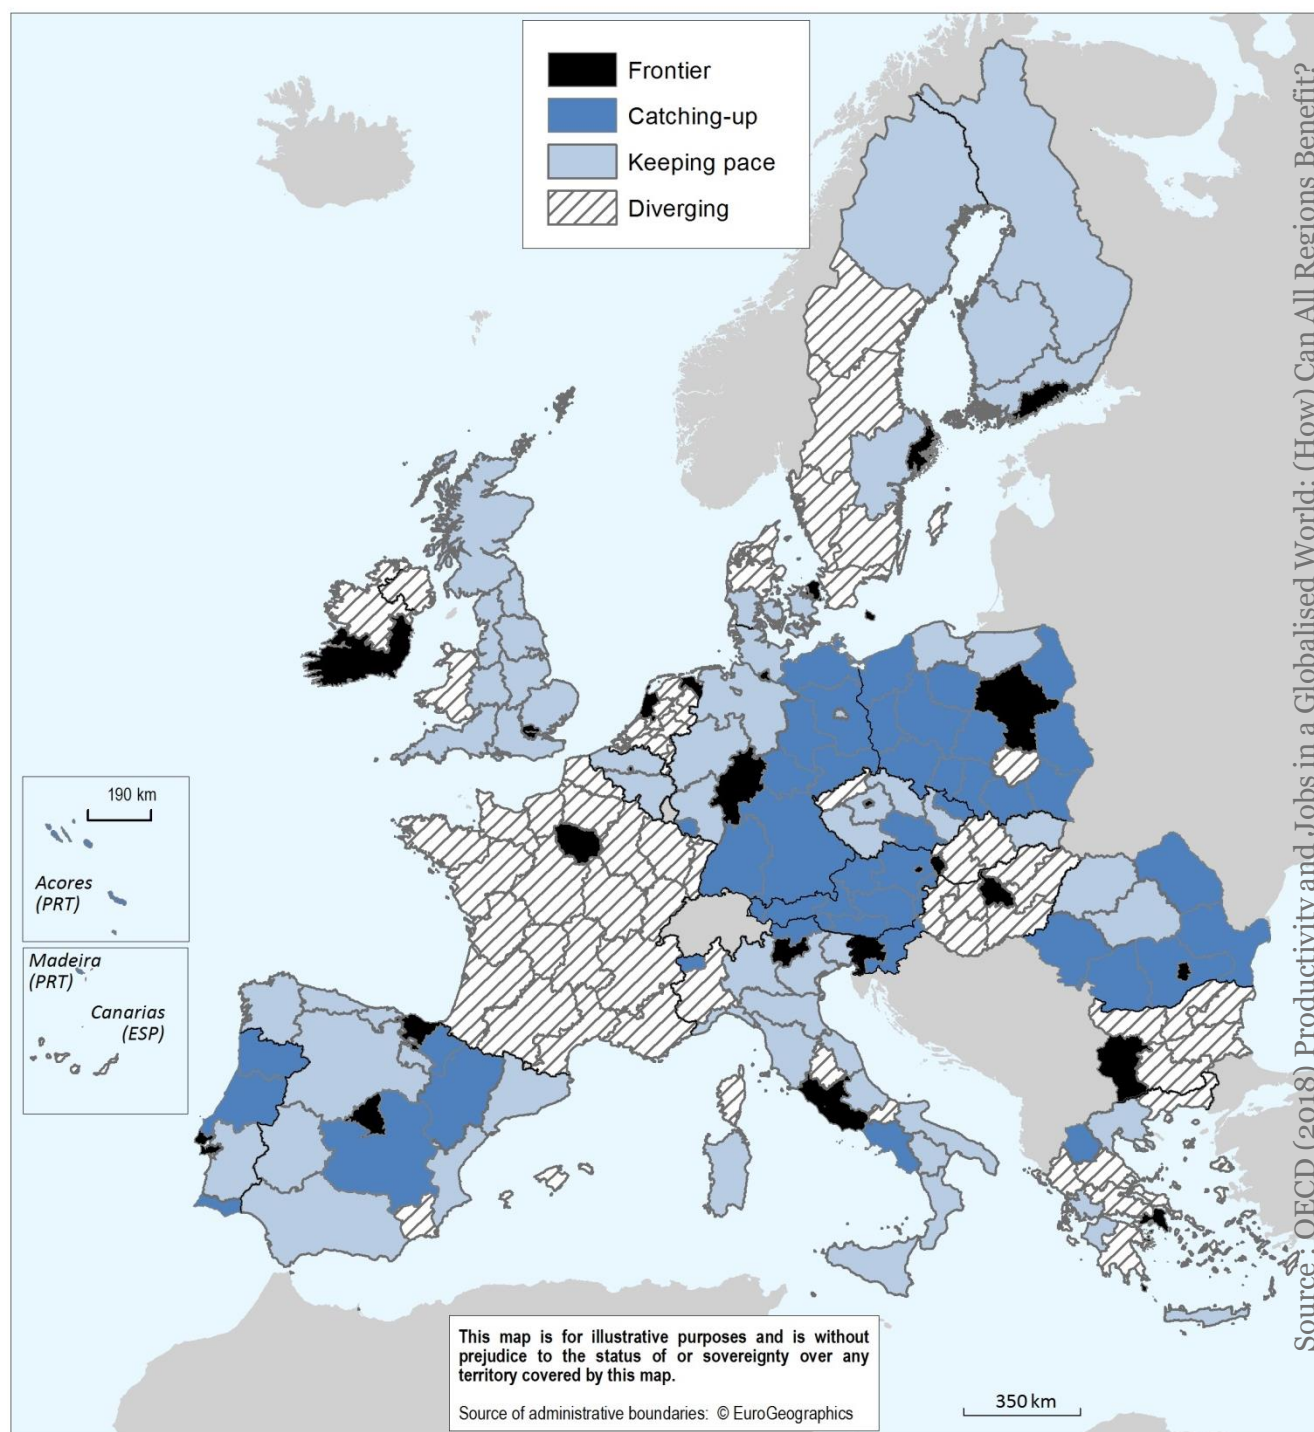

Has **regional productivity converged** to the National frontiers?

(I) Distributed model:

AUT, CZE, DEU, ESP, ITA, POL, PRT, ROU

(II) Concentrated model:

BGR, DNK, FIN, FRA, GBR, GRC, HUN, NLD, SVK, SWE

Generation of labour productivity growth by regions, Germany, 2000-2017

The structural adjustment between the industry and services: Norte region, Portugal

How to address these aggregate vs. regional development trade-offs?

There are two polar policy models:

I. ***Compensating*** the lagging regions and promote labour mobility

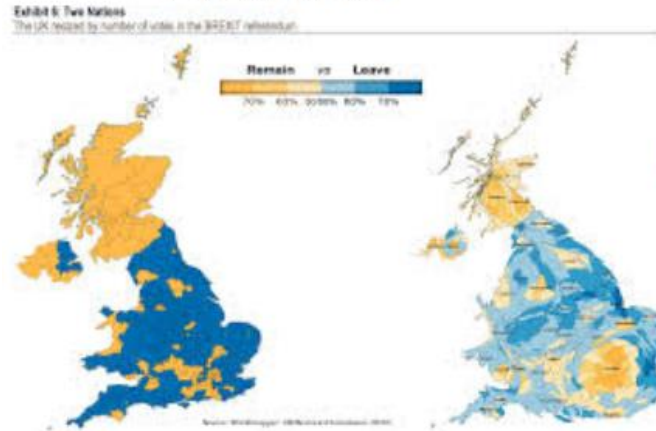

➔ *This do not seem to work over the long-run and my promote the “geography of discontent” (McCann) or “the revenge of places that don’t matter” (Rodrigues-Pose)*

II. Adopt a ***place-based*** (or territorial) approach for regional development

➔ *Quite demanding to adopt tailored development strategies, in particular a strong investment in governance*

The geography of discontent

Brexit 2016

USA Trump swing 2016

France first round 2016

Germany 2017

AfD and Left are strongest in the east

Share of the party vote (%)

Hungary 2018

Italy 2018

Italy election results

% of votes in the lower chamber*

A National territorial productivity strategy

A spatial productivity approach can be viewed as a complement to macroeconomic and sectoral productivity strategies. It is based on three pillars:

- 1) Benefit from **agglomeration economies** in large and dense urban areas (promoting urban growth is not a *zero-sum* game)
- 2) Promote **regional productivity catching-up** in the regions intermediate & rural close to cities. Key role of proximity to agglomeration and tradable sectors.
- 3) Address the specific problems of **remote rural areas**. Challenge of developing tradable sectors. Use of Smart Specialisation strategies.

Remote and less densely populated places have been more vulnerable to the 2008 crisis

The strategic role of Multi-level Governance

- ❑ A central government cannot have as many policies as different types of cities and regions. Designing place-based policies is a **too complex task to be centralised**.
- ❑ But decentralisation needs to be organised as a **partnership** and not only as a process of autonomy and devolution of competencies. By delegating certain tasks central governments can be more strategic
- ❑ Decentralisation works better when it is done in a **process allowing for the asymmetry of capacities at the local level** and experimentation (learning-by-doing)
- ❑ To find the right scale: address governance fragmentation of **metropolitan areas**, promote **supra-municipal cooperation** and use of a **regional level**

Portugal is a centralized country

The share of subnational governments in Public expenditure is low compared with most OECD countries

Post-COVID possible long-term scenarios for regions and cities

Accelerating the digital transition

- More rapid automation of jobs
- Rise in teleworking
- Online delivery of local education and training
- Greater shift to online commerce
- Increased need for digital infrastructure and tools for all communities and households

Revisiting globalisation

- Re-location of production in strategic/essential goods and services
- Restrictions on international movements of people
- Diversification of suppliers

Increasing preferences towards public goods

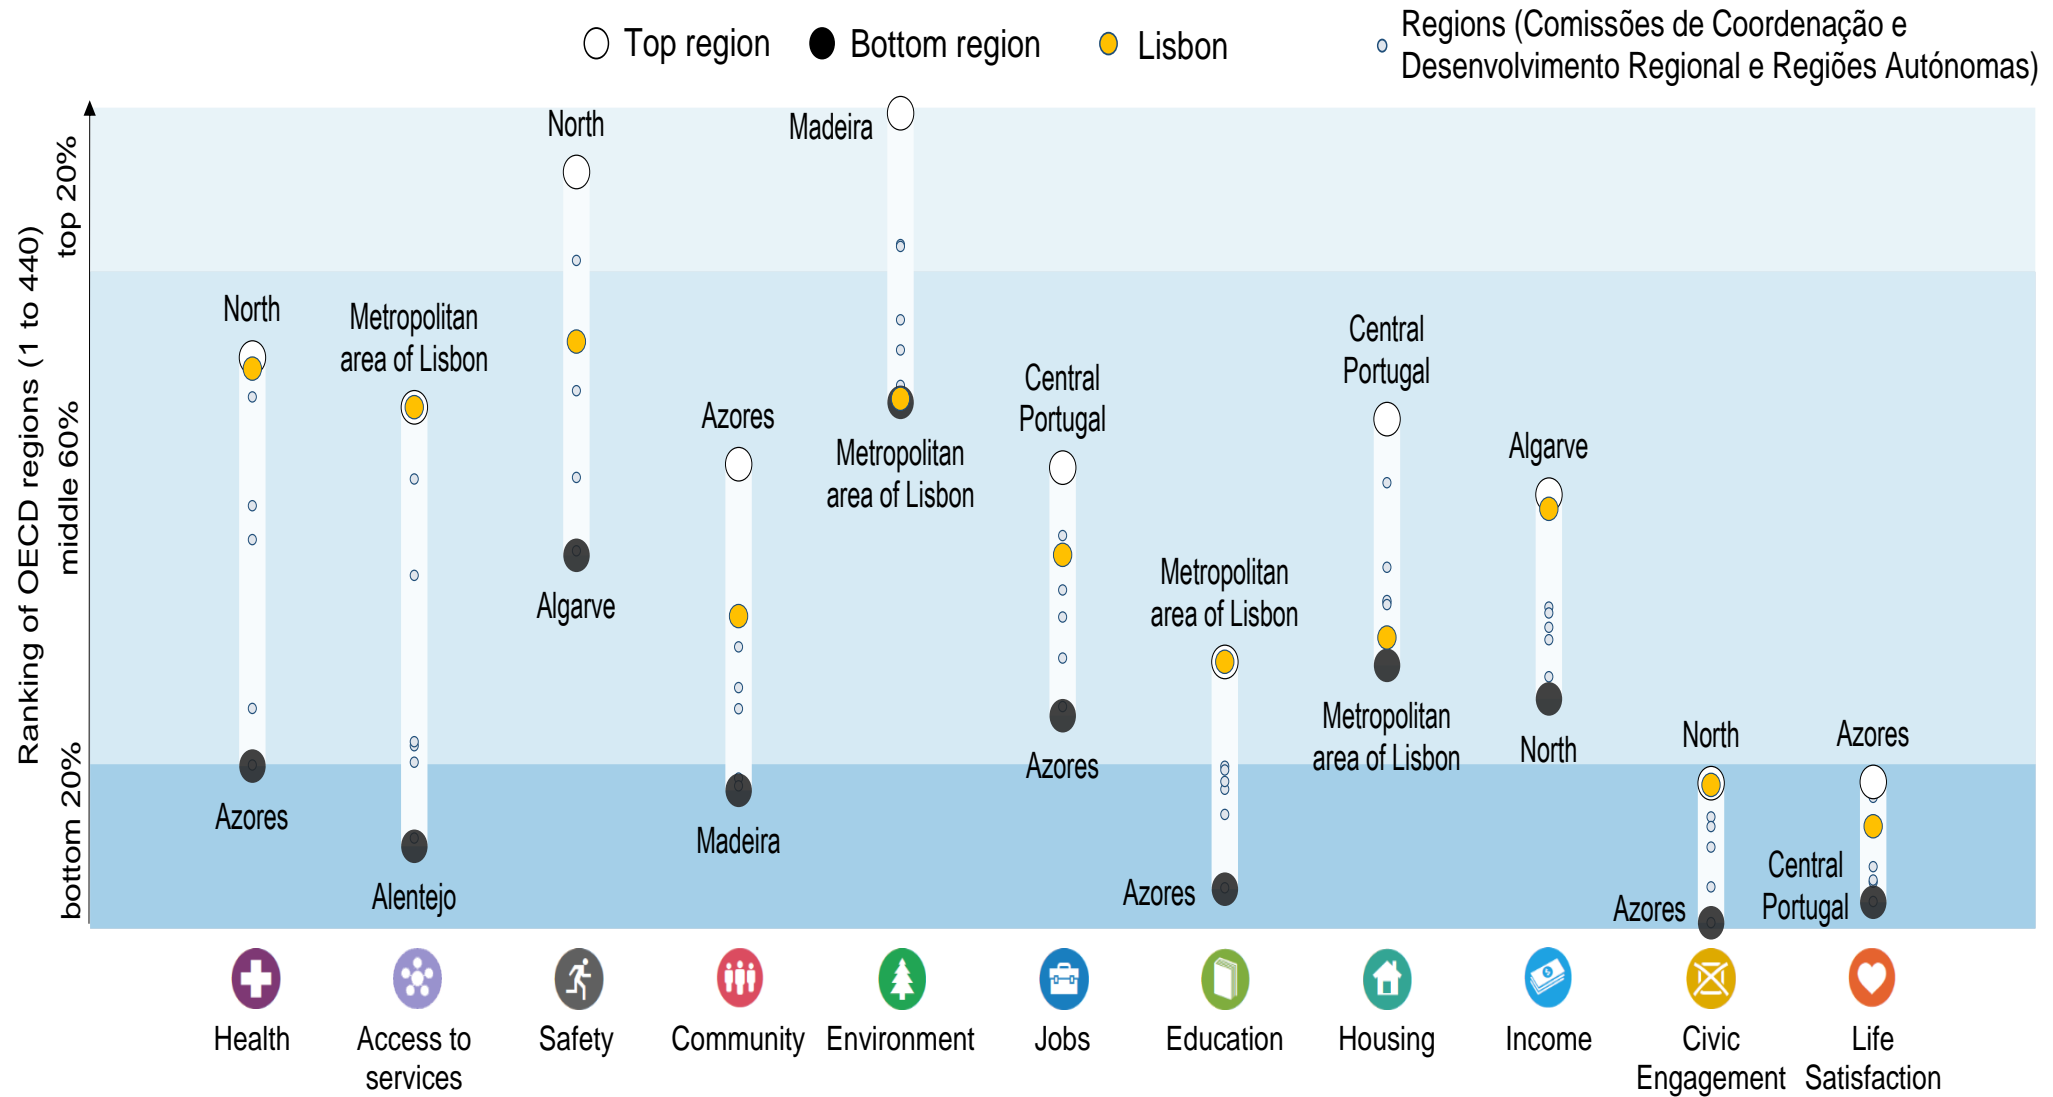

- Increased willingness to implement green measures, albeit pressure to create any job fast
- Greater role for the social economy and corporate social responsibility in local development
- Revisiting job quality for essential workers
- Resilient health systems

Re-engineering cities

- Changes to local spatial planning and design of public spaces
- Rethinking cultural and sporting events

Regional Well-being gaps in Portugal
